biotech fund**

**BIOTECHNOLOGY: THE INDUSTRY OF THE
FUTURE: YOUR CONTRIBUTION TO
INNOVATIVE PROGRESS**

STATUS: February 2025

MEDICAL STRATEGY

company profile

- The company was founded in 1992
- Since 2000: Management of investment funds in the healthcare sector

- Staff: 13
- Total volume under management: approx. €1,3 billion

One of Europe's leading healthcare investment managers

Focus on equity portfolios in the biopharmaceutical sector

01

Biotech & innovative BioPharma stocks

02

Focus on **small and mid-cap** stocks

03

Focus on **innovative therapy developers**

04

Numerous **awards** honouring

05

Long-term **outperformance**

MEDICAL STRATEGY

Our team – interdisciplinary team: scientists as portfolio managers

MARIO LINIMEIER

**Managing Partner
Head of Portfolio Management**
Molecular biologist, business economist,
2 years as transaction consultant at KPMG, > 10 years in portfolio management

KRISTOFFER UNTERBRUNER

Portfolio manager, authorised signatory
molecular biologist, gene therapy specialist

DR. ALEXANDER JENKE

Portfolio manager, authorised signatory
PhD in biology, business economist,
many years of research experience

DR. ANDREAS BUCHBENDER

Portfolio manager
PhD in molecular biology

STEFAN KRAFT

Head of Transaction Management, Risk Controlling & Fund Reporting
graduate economist

DR. DOMINIK LOSER

Healthcare Analyst
PhD in Biology, B.Sc. Biomedical Engineering, M.Sc. Biomedical Sciences, Research Experience

JULIAN NEHRIG

Healthcare Analyst
Medical doctor, BSc in Psychology, experience as a clinical research physician

KATRIN WINTERSTEIN

Head of Trading and Back Office, Authorised Signatory,
Bank Officer, M.A.

PETRA SCHAFFER

Trading and market follow-up
Technical assistant, fund administration

JÜRGEN HARTER

Managing Partner,
banker, certified investment fund expert (ZfU), over 35 years of experience in the banking and investment sector

THOMAS VORLICKY

Managing director
business economist, many years of experience in a major bank

MARTINA BERAN

Head of Sales
Trade scientist, many years of experience in account management

FRANK HANNSTEIN

Relationship Management
Many years of experience in various positions in the asset management industry

SCIENTIFIC ADVISORY BOARD

- **Prof. Dr Thomas Zeller:** Head of the Department of Angiology at the University Heart Centre Freiburg - Bad Krozingen
- **Prof. Dr Karl-Christian Bergmann:** Head of Practice-Based Research, Institute for Allergy Research - University Medicine Berlin
- **Prof. Dr Andreas Rank:** Senior Physician for Internal Medicine, Haematology and Oncology at the University Hospital Augsburg
- **Dr Stefan Meyer:** former Head Global Portfolio Management, Early Pipeline 'Oncology' & 'Neurology/Immunology' at Merck KGaA
- **Dr Alexander To:** US Healthcare Analyst

BIOPHARMA NEWS

outlook

01

Favourable valuations of biotech companies

- Many biotech companies are currently **valued at a median multiple of 5.7x EV/Revenue**, well below the peak of 17.5x in 2021 (as of 25 April 2024, Finerva).
- The **peak sales multiples are also below target**: PS multiples often fall short of 4x, signalling untapped growth potential. In the MEDICAL BioHealth, they are even largely below 2.5x!

02

Better interest rate environment

- **More favourable financing conditions**: The **first interest rate cut by the Fed in four years** (by 0.5% to 4.75-5.00%) makes it easier for biotech companies to access capital for their research projects. Further interest rate cuts **are expected in the US over the next 12 months** (by around 0.5-1.00%). **Historically, the biotech sector has benefited in phases of falling interest rates.**

03

Current reasons for investor restraints

- **Political uncertainties**: The **US government restructuring** is leading to a cautious investment climate, as further changes in health and pharmaceutical policy appear possible. For example, the already implemented Inflation Reduction Act (IRA) has an influence on pricing and possible reimbursement regulations for drugs. This is currently leading to delayed corporate takeovers.

Conclusion: promising investment opportunities

In our view, the current **low valuations** offer an attractive opportunity to invest in undervalued companies in the biotech sector before a **possible market recovery** after the US election.

BIOTECHNOLOGY: THE INDUSTRY OF THE FUTURE

Facts & Figures

Total annual return: over the last **16 years**, biotech has outperformed pharmaceuticals **nine times** and outperformed the S&P **10 times**.

BIOTECHNOLOGY: THE INDUSTRY OF THE FUTURE

Conventional medicine vs biotechnology

DIFFERENCES BETWEEN CONVENTIONAL MEDICINE AND BIOTECHNOLOGY

Source: Evaluate Pharma (2022), own presentation

	conventional	biotechnology
chemical composition	Simple	complex
development process	empirical screening	biotechnology
research fundamentals	Plants, microorganisms, organisms	RNA, DNA, hormones
route of administration	Typically a pill	Typically a syringe or infusion set

SALES BY TECHNOLOGY

Share of biotechnology in global pharmaceutical sales

QUANTUM LEAP SIN MEDICINE

promising innovations

rare diseases

Increasing number of rare diseases treatable

autoimmune diseases

Autoimmune diseases **are very common** and there is a need for new treatments.

oncology

New **targeted therapies** increase the chances of recovery and prolong survival.

cardiometabolic diseases

Promising new treatment options for the widespread diseases of diabetes and obesity

CNS diseases

New therapeutic options for CNS diseases are highly promising for the future.

oncology

QUANTUM LEAPS IN MEDICINE

Oncology: major advances

Cancer treatment: new innovative methods and approaches

precision medicine

- > Determining individual genetic information ('biological markers') to decode the mechanism of the tumour that drives cell growth
- > Targeted therapy can be developed with the help of these analyses.
- > Maximisation of therapeutic success through tailored treatment

immunotherapy

- > Harnessing the immune system to fight cancer
- > Tumour cells use defence mechanisms to escape immune defence and ensure their survival
- > Cancer immunotherapy: targeted deactivation of tumour defence mechanisms and activation of the immune system

VS

chemotherapy

Medication has an **unselective** effect on the tumour

Consequences:
Undifferentiated effect with sometimes considerable side effects

'It is more important to know which person has an illness than to know which illness a person has.' Hippocrates

QUANTUM LEAPS IN MEDICINE

ONCOLOGY

Above-average growth

> For >10 years in a row with double-digit growth

> Predictions:

~\$440 billion USD
will be the increase in global spending by 2028

>100
new drugs

> According to the WHO, the number of cancer cases will increase **by more than 70 per cent by 2050.**

Cancer treatment: Global spending in billions of US dollars

In the next five years:

Expected increase

Expenditure up by almost 100%

QUANTUM LEAPS IN MEDICINE

Oncology and weight loss therapies in focus

> Global pharmaceutical expenditure: total growth through 2028. Forecasts by therapeutic area show differentiated developments.

> ... with the highest growth rates in terms of drug spending

rare diseases

QUANTUM LEAPS IN MEDICINE

rare diseases

When is it a rare disease?

A disease is considered rare if it affects fewer than **200,000 (US)** or fewer than **1:2,000 (EU) individuals**.

*'Rare diseases are rare, but there are a **large number of them.**'*

Prevalence of rare diseases

Worldwide, approx. **300 million** affected (of which 50% are children)

30% die before reaching their **5th** birthday.

Approximately **7,000** rare diseases (only **5%** of which can be treated)

In four of the last five years, the FDA has approved more drugs for **rare diseases** than for their non-rare counterparts!

Gene therapy approaches as a great source of hope

QUANTUM LEAPS IN MEDICINE

rare diseases

Worldwide drug sales for rare diseases in billions of USD (2018 – 2028E)

Orphan drug sales growth

Annually **12%** vs. 7.0 per cent for other drugs

Share of total sales:

From around 13% (2018) to around **20%** (2028) expected

cardiometabolic diseases

QUANTUM LEAPS IN MEDICINE

cardiometabolic diseases

01

What are cardiometabolic diseases?

- Heart disease, heart attack, stroke, etc.
- **Risk factors:** diabetes, obesity, high blood pressure, unhealthy diet, lack of physical activity, smoking, etc.

02

Prävalenz kardiometabolischer Erkrankungen

- Cardiovascular diseases are among the **leading causes of death worldwide.**
- **Risk factors** can be influenced and offer great potential for prevention.

'You don't die from obesity or diabetes, but from cardiovascular disease.'

In addition to many existing therapeutic approaches and behavioural changes, **new drug treatments for obesity** are a source of hope.

QUANTUM LEAPS IN MEDICINE

Obesity: secondary diseases & costs

Obesity-related illnesses

BIOTECH OR TECHBIO?

AI in drug discovery

target identification

1

Identifying **disease-related molecules** or signalling pathways in the body that can be influenced by drugs requires the **processing of large amounts** of biomedical and research-related **data**.

Prediction of protein structures

2

3D protein structures are crucial for **understanding** how a drug binds to a target protein. Despite the progress made by AlphaFold2, **predicting** protein ligands remains a **complex challenge**.

virtual screening

3

The development of chemical **databases** containing billions of molecules offers opportunities, but requires more efficient virtual **screening methods**, since conventional approaches take a long time to find **suitable lead substances**.

Chemical and functional properties

4

It is important to understand how **the body processes a drug**. Despite advances in neural networks based on QSARs, further efforts are needed to predict abnormal results **in different protein families**.

De novo design

5

This is a **process in** drug development in which **new molecular structures** are designed from scratch using computer or **AI methods** to **specifically** target biological targets such as proteins or enzymes associated with diseases.

Rededication/conversion of medicinal products

6

In this case, the abundance of **data** on a **already approved or tested drug** is used to repurpose it in new directions.

BIOPHARMA IN FOCUS: INNOVATION CYCLE

Rapid increase in research publications

The pace of innovation is accelerating:

The number of publications of research into new innovative technologies is growing rapidly.

BIOPHARMA IN FOCUS: INNOVATION CYCLE

Rapid increase in developments

The pace of innovation is accelerating:

The programmes in the pre-clinical and clinical development phases have been growing for years.

BIOPHARMA IN FOCUS

Why small and mid caps?

Small businesses are particularly innovative

Small and mid-caps account for > **70%** of the global clinical pipeline

Focus on young innovators with great growth potential

BIOPHARMA IN FOCUS: HISTORICALLY HIGH...

The pharmaceutical industry is facing patent expiries.

Annual sales threatened by patent expiries in the next five years at Big Pharma

>\$190 billion in the top 10 industrial nations

Explanation: Most of the drugs on the market today are small molecules that are produced by chemical synthesis. With our increasing understanding of disease processes at the molecular level (biotechnology), the number of biological targets for combating disease (biologics) is also increasing.

The pharmaceutical industry has little choice but to increasingly take over biotech companies in order to replace products that it is unwilling or unable to produce itself.

BIOPHARMA IN FOCUS

Big Pharma under pressure to innovate

'A storm is coming': major patents set to expire in the coming years (2022-2029)

* 2021 Global Sales

BIOPHARMA IN FOCUS

Big Pharma under pressure to innovate

WHAT TO DO?

BIOPHARMA IN FOCUS

Increasing takeover activities expected

There are many reasons to support an increase in the number of acquisitions:

patent hurdle

leads to a high demand for Big Pharma to refill the pipelines

mandatory discount (IRA)

also leads to a high demand for Big Pharma to refill the pipelines

low equity valuation levels

of small and mid caps as innovative takeover targets

Historically high liquidity reserves

at a number of large cap companies

> 500 billion USD 'Firepower' among the top 16 pharmaceutical companies

definition:

- **Comfortable financial strength:**
level of debt that a company can take on at current EBITDA to achieve a net debt/EBITDA ratio of 3x.
- **Stretched financial strength:**
would a company take on a net debt/EBITDA ratio of 5x

OUR FUND: MEDICAL BioHealth

Example investment: Vertex

'**Big Biotech**' Vertex (founded in 1989)
 Pure innovation: undisputed world market leader in cystic fibrosis drugs

Best in Class

Disease:
Cystic fibrosis

Cystic fibrosis is a rare congenital metabolic disorder. The disease causes thick mucus to form in the cells, gradually clogging the organs.

Vertex's innovative treatment for cystic fibrosis covers almost **100% of the global market!**

Vertex is also applying its expertise and financial resources to various other indications and technologies:

OUR FUND: MEDICAL BioHealth

Example investment: Crinetics

> Focus on endocrinological (hormonal) diseases!

> Innovations in the field of rare diseases

disease

Acromegaly

Acromegaly occurs when a benign tumour grows on the pituitary gland (part of the brain) and secretes increased amounts of growth hormone in adulthood.

Current treatment:

Mostly through painful, monthly, intramuscular injections

> **Innovation:**
just 1 tablet of Paltusotine a day

Innovation: better method of administration

vs

Paltusotine

- Acromegaly
- Carcinoid syndrome
(symptom complex caused by various tumours)

> **Innovation:**
application benefit for patients

Market launch; acromegaly 2025 / carcinoid syndrome 2027 Peak sales 2034 (Consensus, visible alpha): 700 million US\$ / 1.35 billion US\$

Best in Class

Innovation: improved effectiveness

Atumelnant

- Adrenal hyperplasia (adrenal insufficiency)
- Cushing's syndrome
(excessive cortisol production can lead to health problems such as anxiety or depression, high blood pressure, insomnia, diabetes, etc.)

> **Innovation:**
potentially greater efficacy

Market entry: adrenal hyperplasia 2028 / Cushing's syndrome 2028/29 Peak sales 2034 (Consensus, visible alpha): 950 million US\$ / 600 million US\$

Example investment: Crinetics

➤ Emerging leader in chronic lung disease

➤ **Innovation through** inhaled reformulations of established active ingredients

Best in Class

MAC lung disease

- Arikayce® / liposomal amikacin (aminoglycoside antibiotic)
- first and only approved medication (since 09/18)
- Peak Sales-Potential ≥ 1.5 billion USD

October 1, 2018 10:18 AM EDT Updated 10:52 AM PT

Insmmed follows a new pathway at the FDA for antibacterials, winning quick OK for Arikayce

Val Kennedy

The FDA granted accelerated approval for Insmmed's drug Arikayce for the treatment of a lung disease caused by the bacteria group Mycobacterium avium complex, or MAC, in certain patients who have not responded to conventional treatment. And regulators used the moment to flag a new pathway opened at the FDA that is intended to speed up the arrival of a new generation of badly needed antibacterials.

Arikayce is the first drug to be approved under the new Limited Pathway for Antibacterial and Antifungal Drugs, or LPAD, which allows for more streamlined clinical trials involving smaller patient populations.

Difficult-to-treat bacterial lung infections. Particularly dangerous for patients with lung cavities, COPD or immune deficiencies.

Symptoms: chronic coughing, tiredness, weight loss, fever.

bronchiectasis

- Brensocatib (DPP1 inhibitor)
- Presentation of extremely strong PIII efficacy data on 05/23 -> possible approval as the first drug in Q2/2
- Peak Sales-Potential ≥ 3 billion USD

Insmmed stock skyrockets on Phase 3 lung disease data

Max Gelman
Senior Editor

Shares of Insmmed \$INSM more than doubled Tuesday morning after the company released Phase 3 data in a respiratory disease called bronchiectasis.

The company's drug, known as brensocatib, reduced patients' pulmonary exacerbations by about 20% in both the low- and high-dose arms compared to placebo, Insmmed said Tuesday. The biotech expects to file for FDA approval by the end of 2024, with a potential decision expected in "mid-2025," according to a [press release](#).

Irreversible bronchial dilation or bulging, usually accompanied by persistent inflammation and bacterial infections.

Symptoms: chronic cough, chest pain, shortness of breath, repeated pneumonia.

NASDAQ Biotechnology	206.32 %	334.26 %
Amex Pharmaceutical	86.54 %	454.04 %

As at 30 January 2025; Source: vwd; Price indices in EUR; For the calculation of the index performance and the exchange rate conversion, the previous day's closing prices were used. Since the fund is mainly invested in North America, the time difference was taken into account

Performance is calculated according to gross performance (BVI method). The front-end load (on investment and reinvestment) was not taken into account, nor were individual costs such as custody fees. If the front-end load and custody fees are included, performance would be lower. Past performance is no guarantee and no indicator of future performance.

BIOTECHNOLOGY: THE INDUSTRY OF THE FUTURE

6 reasons to invest in biotech now

reason #1

Valuation historically attractive

As a segment of the stock market that is highly sensitive to interest rates, biotech stocks have suffered particularly from the rapid rise in interest rates. The phase of irrational undervaluation of biotech companies is coming to an end. This is a promising prospect for investors.

reason #2

Improved macro environment

The trend towards falling interest rates supports capital-intensive research, meaning that fundamental aspects are likely to be given more weight again in the valuation of biotech companies. This will turn the headwind for biotech companies into a tailwind.

reason #3

Big Pharma needs biotech

The pharmaceutical industry is threatened by patent expiries on an unprecedented scale. To compensate for this competitive disadvantage, it has to buy in innovations. This makes many biotech companies takeover candidates, for which lucrative premiums are paid.

reason #4

Increasing innovative strength

The number of research publications on new, innovative technologies is rapidly increasing, as is the number of programmes in preclinical and clinical development. Artificial intelligence will revolutionise basic research.

reason #5

Demographics and civilization

By 2060, there will be 1.7 billion people over the age of 65 worldwide. In addition, increasing prosperity is contributing to lifestyle diseases such as obesity.

reason #6

Putting the Tech in BioTECH

Disruptive technologies and technological progress are increasingly permeating research, accelerating processes and bringing humanity a step closer to a complete understanding of nature. Will BioTECHNOLOGY replace two purely technology-driven decades?

WHY INVEST IN MEDICAL BioHEALTH?

reason #1

Focus on young innovation leaders with significant potential for value appreciation

reason #2

In-depth biomedical expertise

reason #3

Long-standing track record with significant outperformance vs. benchmark

reason #4

Disciplined, structured analysis and investment process

BIOPHARMA NEWS

Conclusion

Macroeconomic disruptions (fears of inflation, interest rates and recession, geopolitics) weigh on share prices at times

Continued low valuation levels in the small/mid cap biotech segment, with some companies valued below cash

- Numerous **investment opportunities** for stock pickers with a long-term horizon
- Basis for possible **future outperformance**

Special feature of the biopharmaceutical market: product advances are **completely uncorrelated** with macro factors + largely **cyclically independent** demand for essential medications/therapies

Impending **patent cliff** and **rebate requirement (IRA)** leads to licensing and takeover pressure among **large caps**, which have to reach for innovative players: increasing **M&A** activities – but fewer megamergers (FTC)

In the current market environment: focus on biotech companies with...

- clinically validated products and technologies
- solid capital resources

ESG

Sustainability profile – Article 8 Disclosure Ordinance

- > **Exclusions** of violations, including* the following:
- UN Global Compact
 - Controversial weapons

- > **ESG integration** in the investment processes•
- Cooperation with ESG researchers Sustainalytics / MSCI **

MEDICAL BioHealth is categorised as:

Sustainable investment in accordance with MiFID II Art. 2 No. 7C: complies with the sustainability-related investment objectives in accordance with the new MiFID requirements

Art. 8 (Plus) according to the EU Disclosure Regulation

Products from innovative biopharmaceutical companies can make a positive contribution to achieving the UN Sustainable Development Goal #3.

FACTS

Der Newsletter von  **MEDICAL STRATEGY**

This is a non-binding marketing communication. It is provided for information purposes only and does not constitute a public offer, a recommendation, advice or an invitation to buy or sell fund units, nor should it be regarded as an invitation to make an offer to enter into an agreement for investment or ancillary services. It is not a financial analysis and therefore does not have to meet all the legal requirements for the impartiality of financial analyses. It is therefore also not subject to a ban on trading prior to the publication of financial analyses. The value of the fund and thus the value of each unit can rise and fall compared to the issue price. This may mean that investors do not receive the full amount invested at the time of sale of the units. There is no guarantee that the objectives of the investment policy will be achieved.

Past performance is no guarantee of future results.

Further detailed information on the opportunities and risks can be found in the sales prospectus and the key information document. The sales prospectus, the key information document and the associated semi-annual and annual reports are the sole binding basis for the purchase of fund units. They are available from the management company Hauck & Aufhäuser Fund Services S.A., 1c, rue Gabriel Lippmann, 5365 Munsbach, Luxembourg and at <https://medicalstrategy.de/fonds/medical-bio-health>

The information is based on the current legal and tax situation. No guarantee can be given that this will not change as a result of legislation, case law or decrees issued by the tax authorities. Changes may also be introduced with retrospective effect and have an adverse impact. The tax treatment depends on the personal circumstances of the respective investor. For detailed information, investors should therefore consult a tax advisor.

The statements of opinion contained in this product information reflect the current, carefully prepared assessment of Medical Strategy GmbH; these are subject to change at any time without prior notice. Despite careful procurement and provision, Medical Strategy GmbH and third parties from whom Medical Strategy GmbH obtains information do not assume any liability for the correctness, completeness, timeliness or accuracy as well as availability of the data provided and displayed within the scope of this information offer.
